Helix VPN — Screen Wireframes & Mockups

Revision: 1 Last modified: 2026-07-04T12:00:00Z Status: Complete

Overview

Complete screen specifications for all Helix VPN applications across 8 platforms. Every screen is designed in light + dark theme, with responsive variants where applicable. Wireframes are described in ASCII-art layout form, referencing the component library for detailed component specs.

Design token reference: All visual values (colors, spacing, border radii, elevation, typography sizes and weights) referenced in wireframe annotations correspond to canonical design tokens defined in `opendesign/helix/tokens.css` (for CSS-based platforms) and the platform-specific token mappings (`ThemeData` for Flutter, QML properties for Aurora, etc.). The `--hx-*` prefix indicates the canonical CSS custom property. Always consult `tokens.css` or the `DESIGN.md` token tables for the authoritative values — never hardcode pixel values from wireframe annotations.

Platform Families

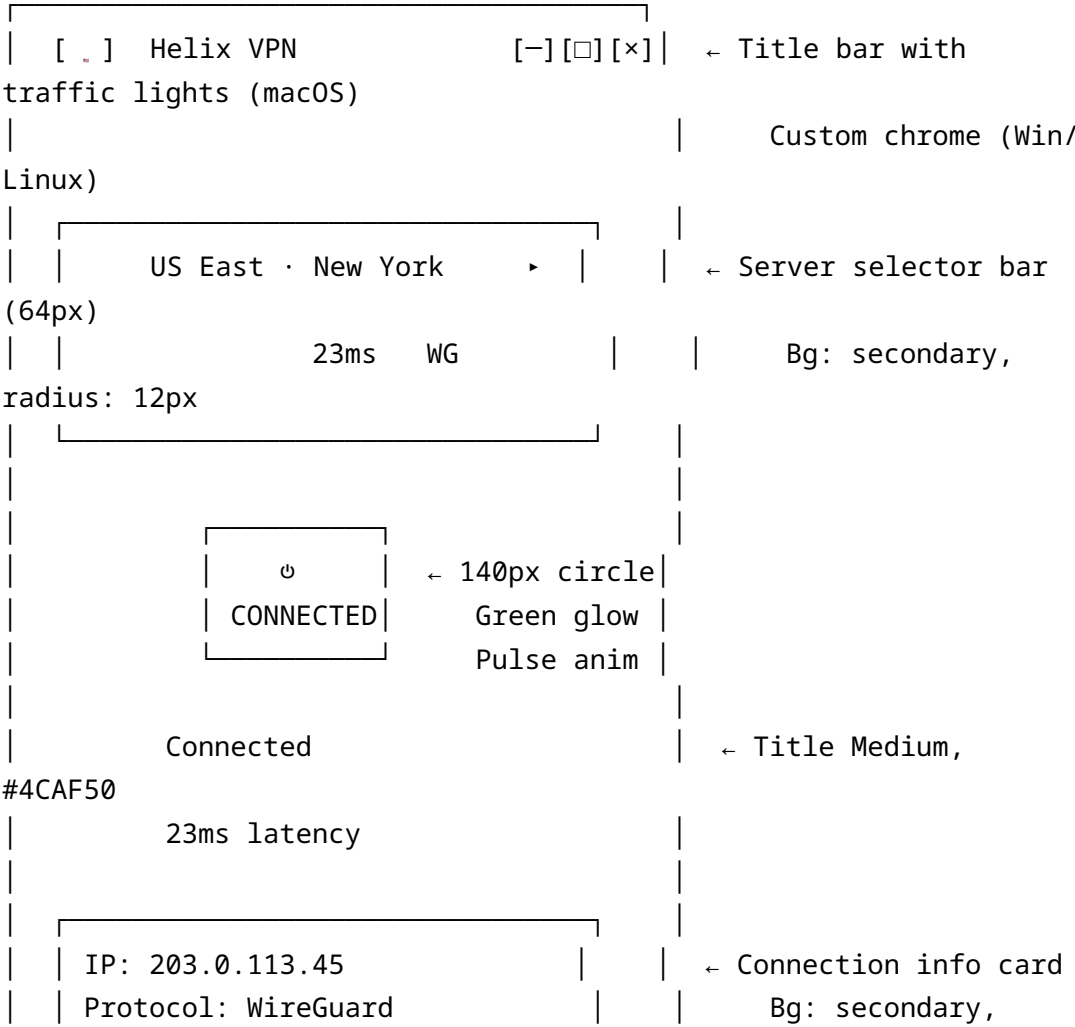

Family	Platforms	UI Framework	Window/Screen Pattern
Desktop	macOS, Windows, Linux	Tauri v2 + React	Resizable windows with tray integration

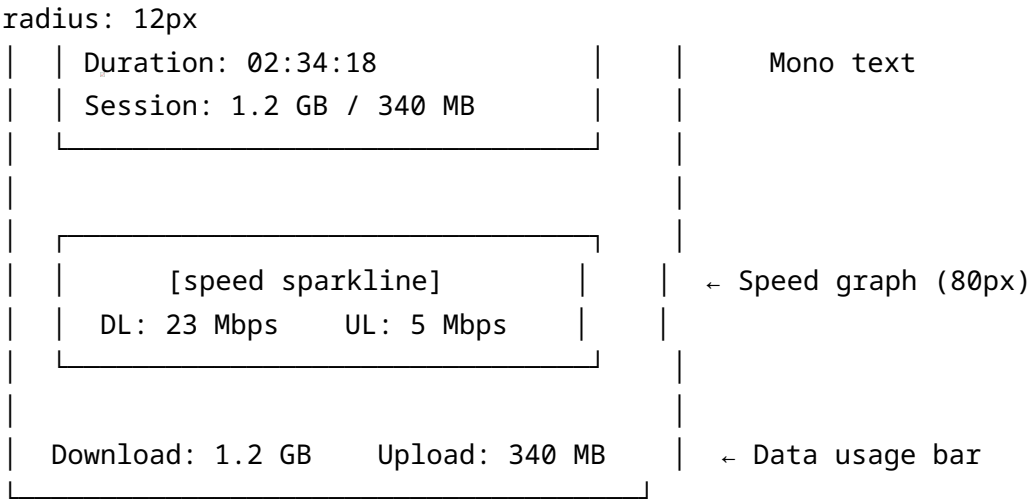

Family	Platforms	UI Framework	Window/Screen Pattern
Mobile	Android, iOS, HarmonyOS	Flutter + Dart	Full-screen, edge-to-edge, gesture-driven
Aurora	Aurora OS	Qt6/QML + Silica	Gesture-driven page stack, Cover pages
Web	Chrome, Firefox, Edge, Safari	MV3 Extension + PWA	Popup + Options + Browser actions

1. Desktop Screens (Tauri)

1.1 Main Window — Connected State

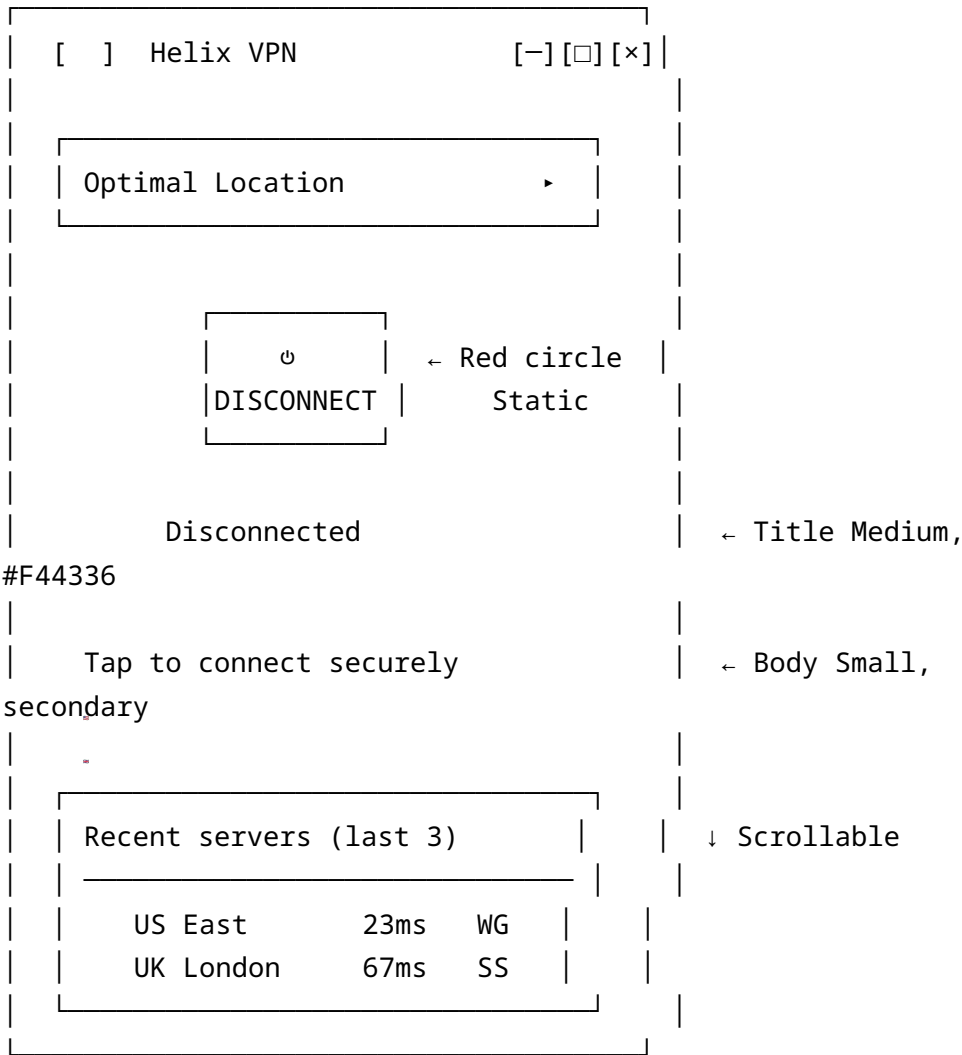

Window: 420px × 600px · Min: 360px × 480px

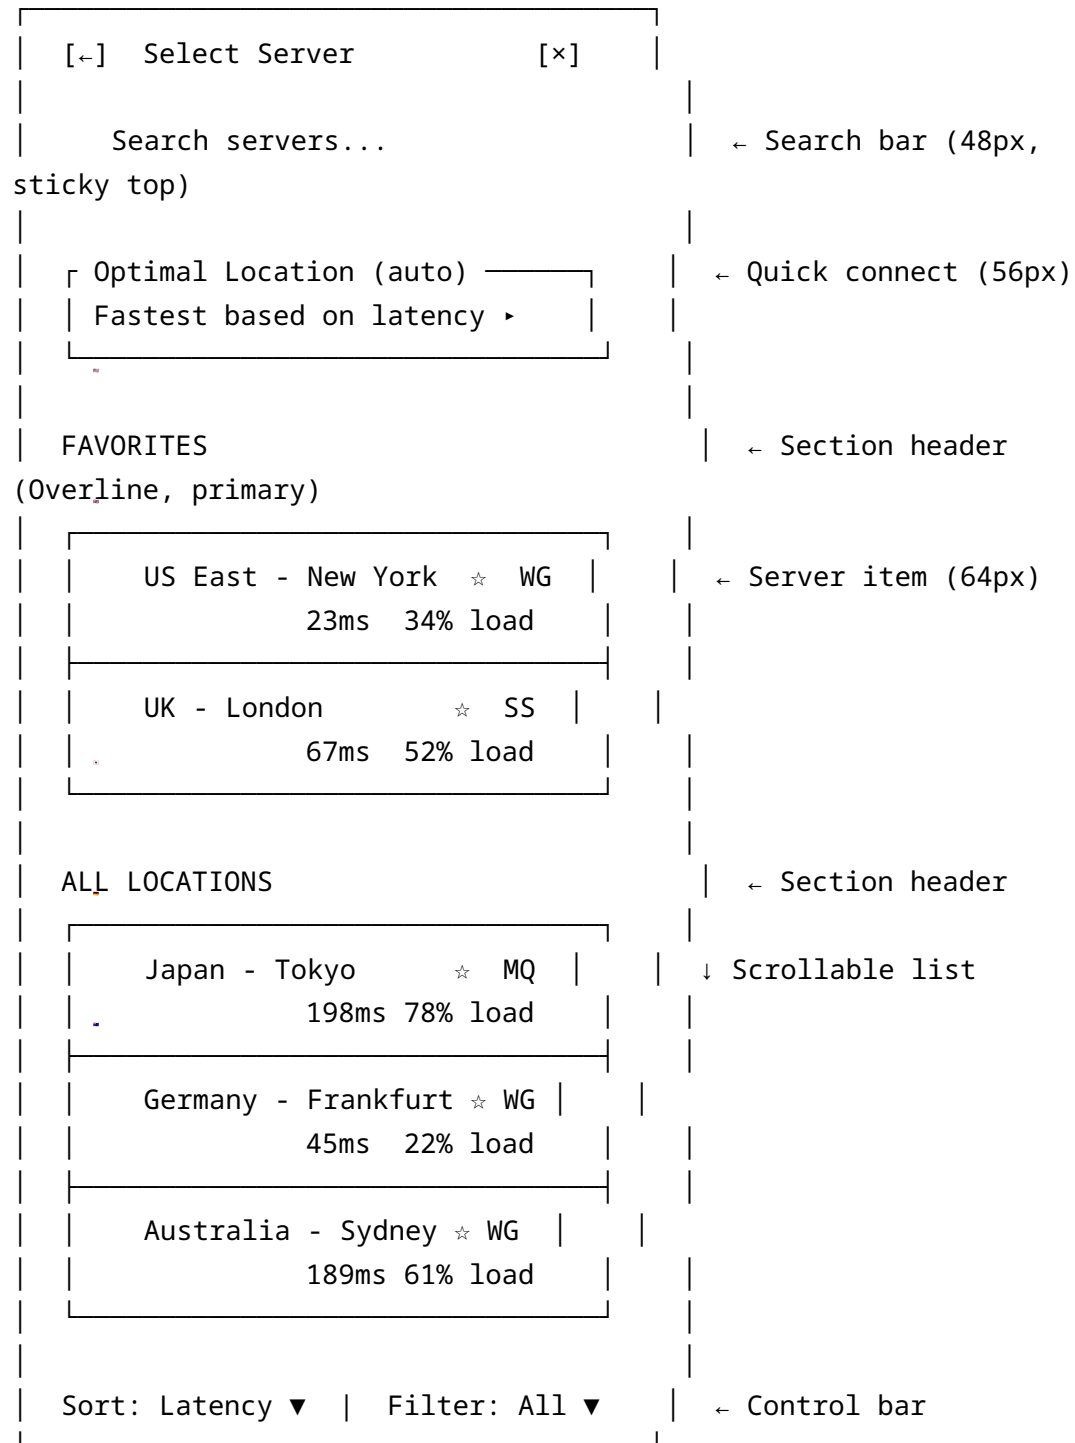

1.2 Main Window — Disconnected State

Window: 420px × 480px (compact)

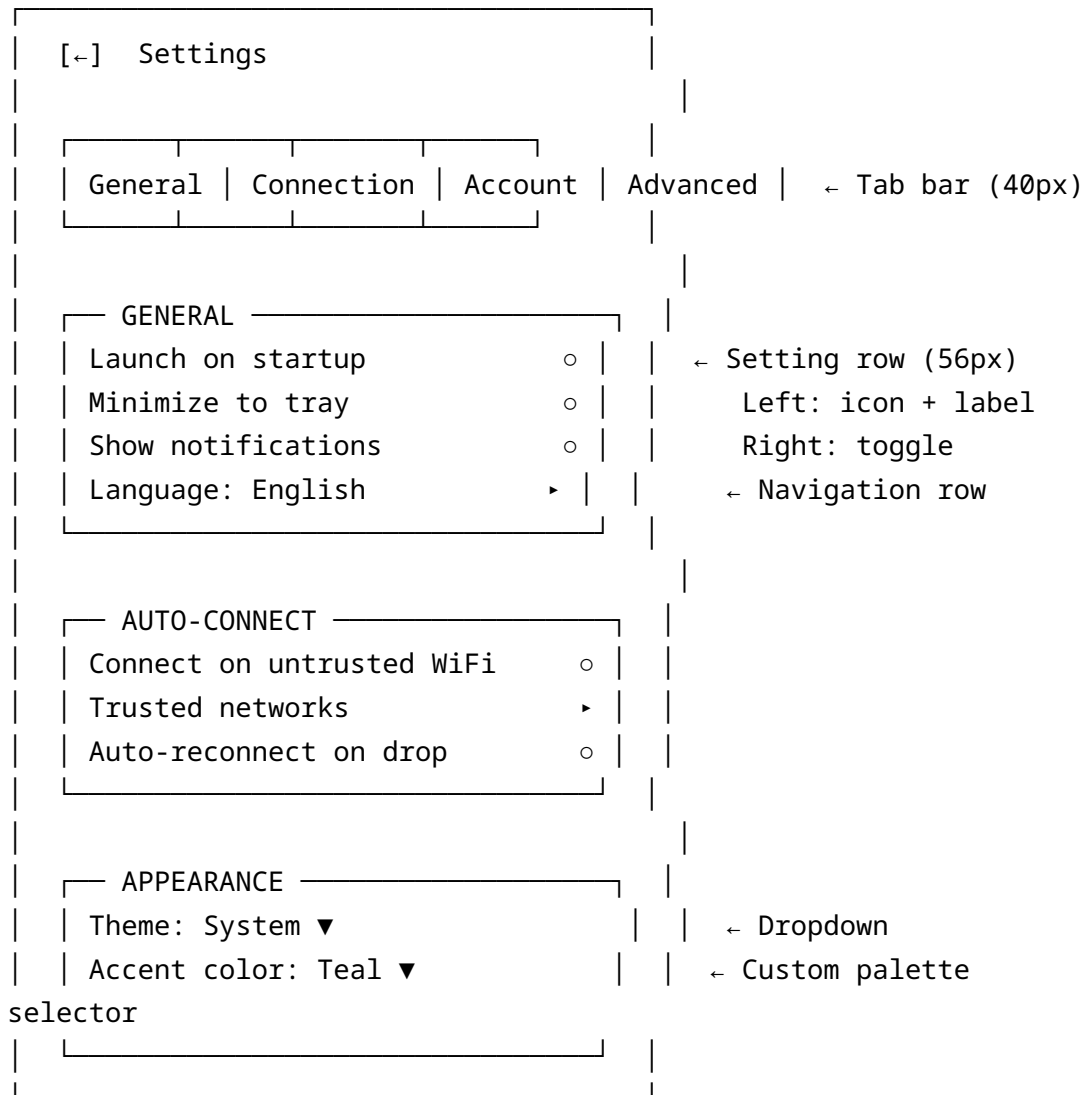

1.3 Server Selection

Window: 520px × 700px

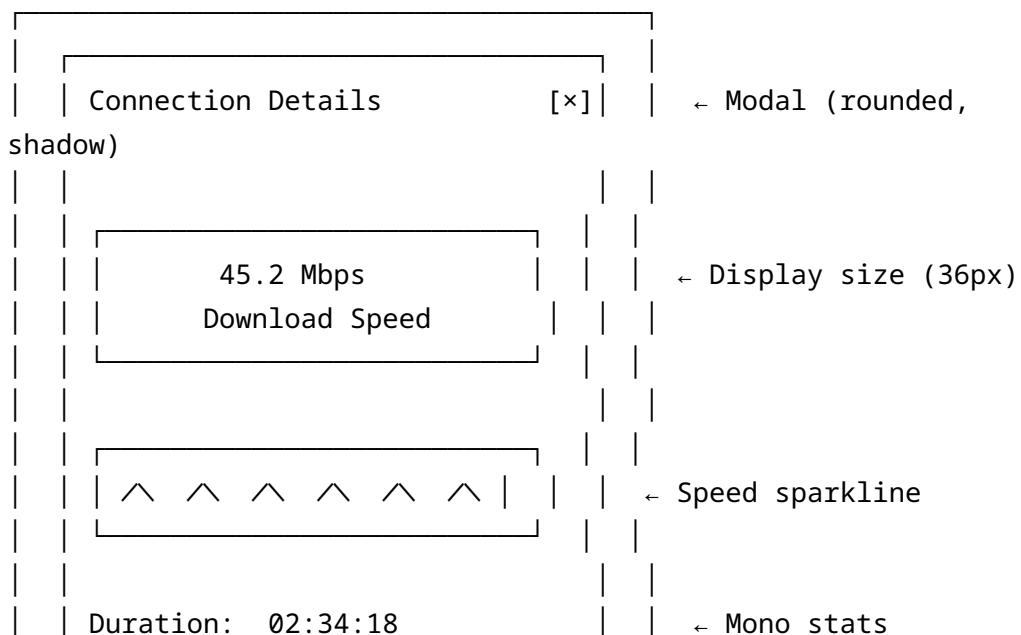

1.4 Settings (Tabbed)

Window: 640px × 700px

1.5 Connection Details / Stats Modal

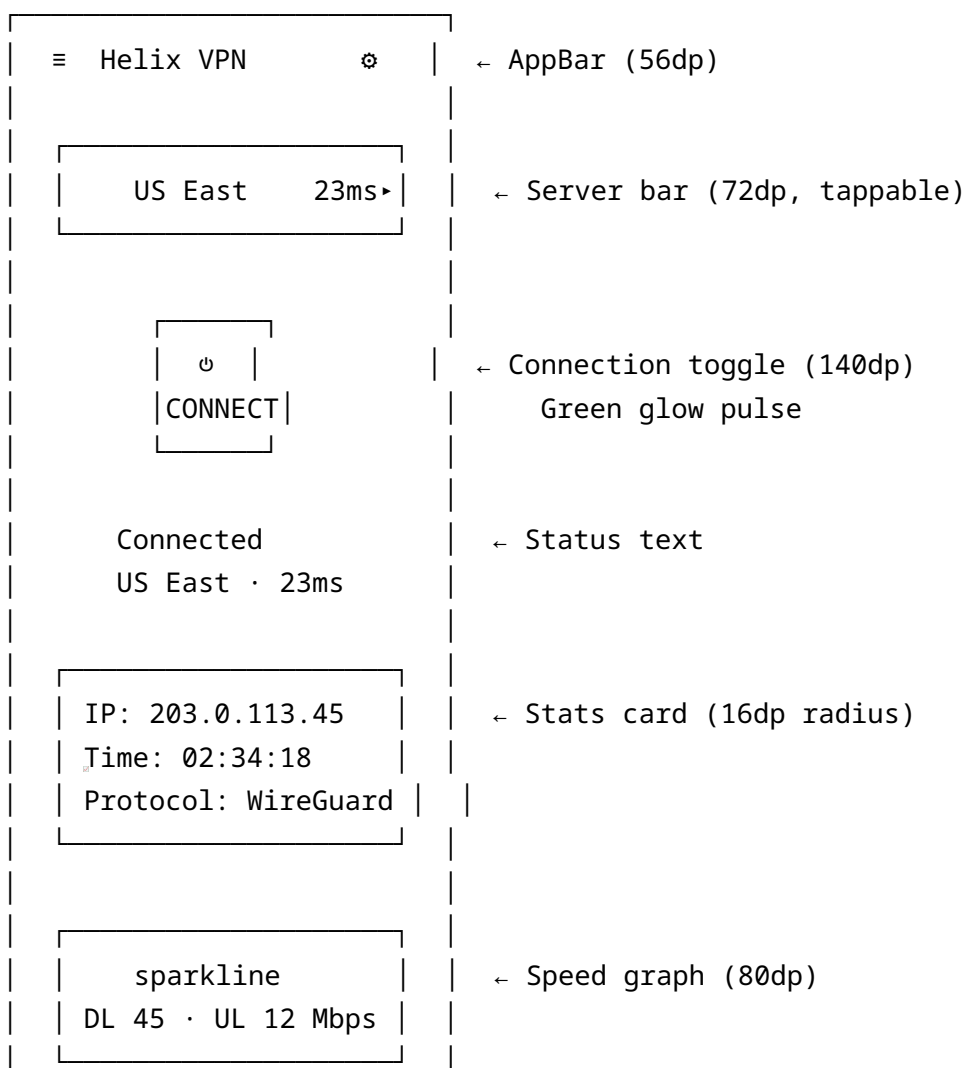

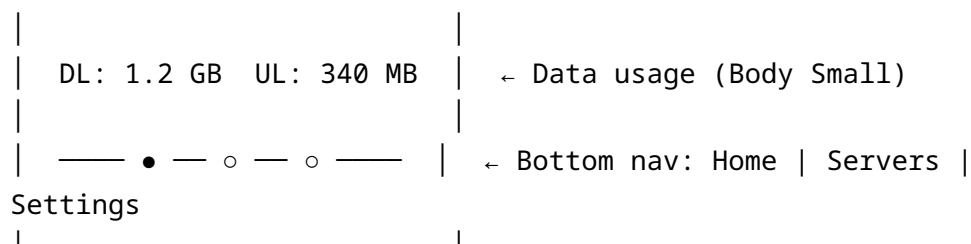

Data in:	1.2 GB
Data out:	340 MB
Protocol:	WireGuard
Cipher:	ChaCha20-Poly1305
Key:	X25519
Server:	us-east-1
IP:	203.0.113.45
Handshake:	2m 34s ago

2. Mobile Screens (Flutter)

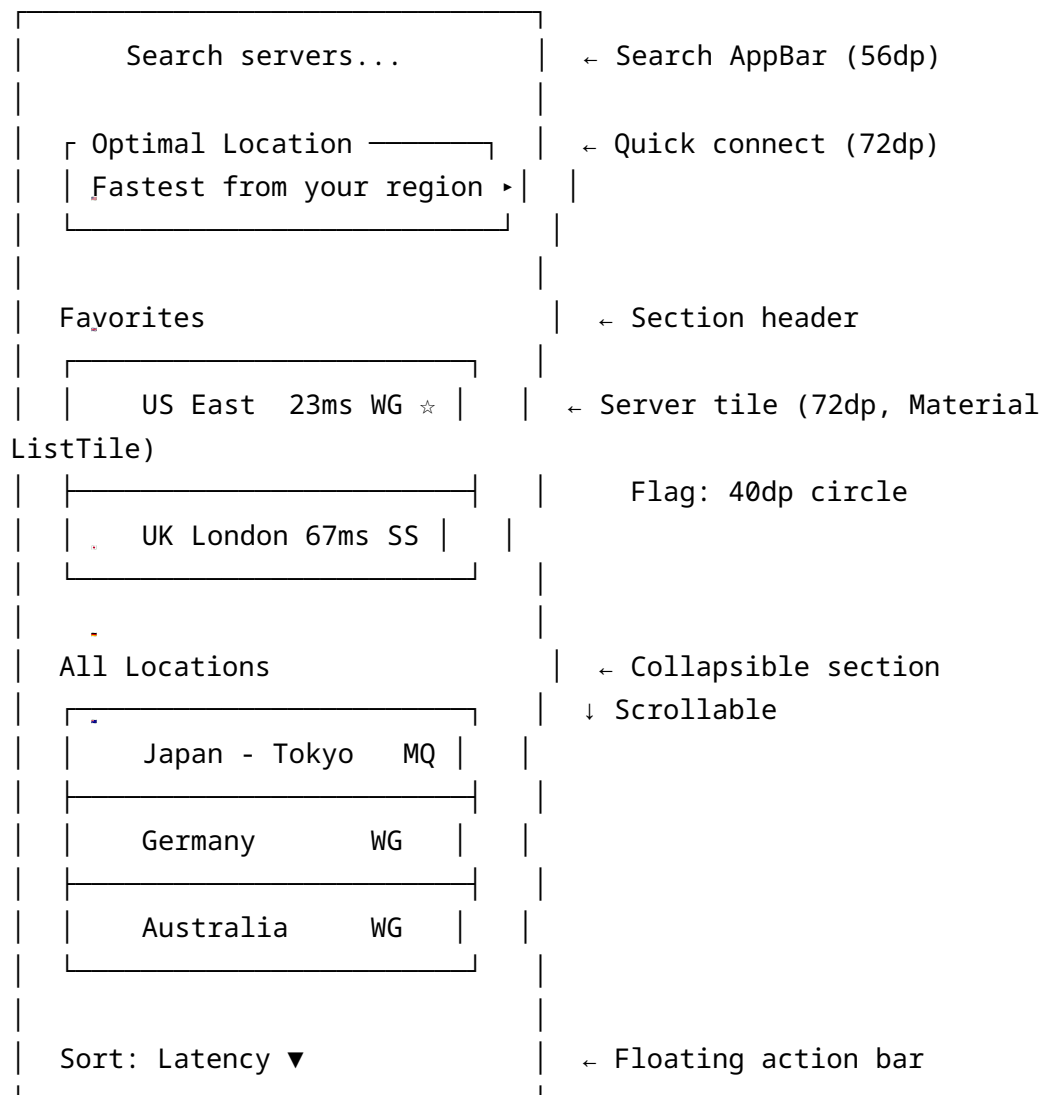

2.1 Connection Home Screen

Full screen, SafeArea respected

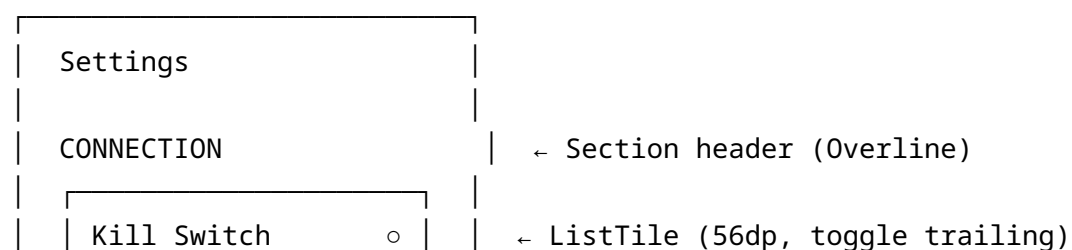

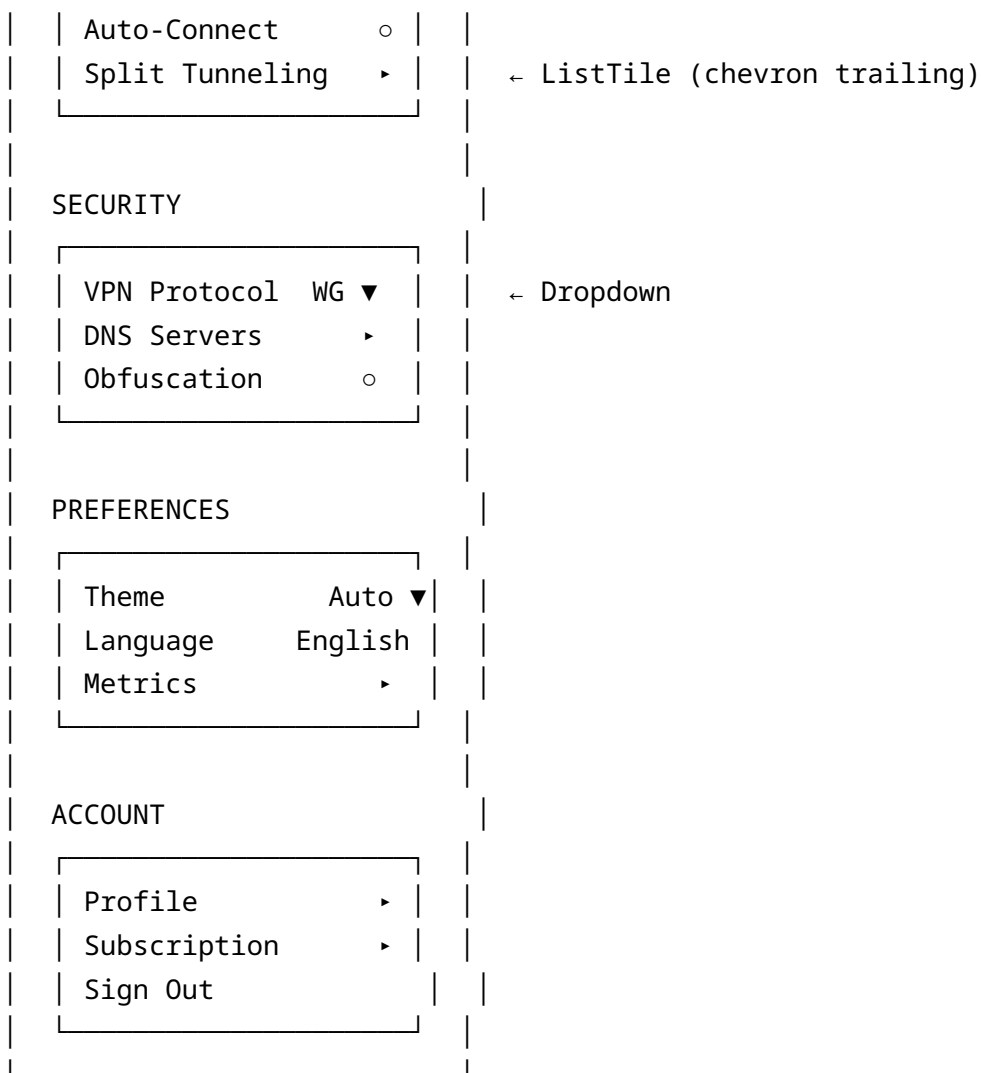

2.2 Mobile Server Selection

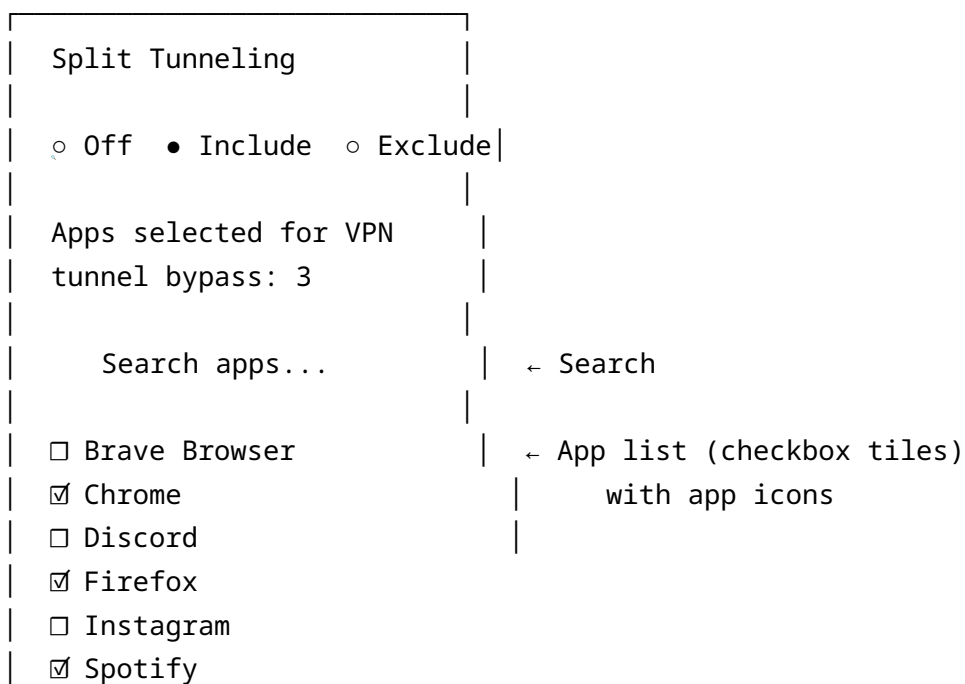

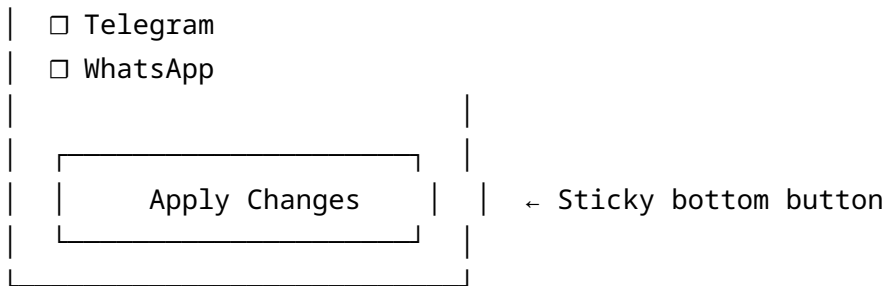

2.3 Mobile Settings

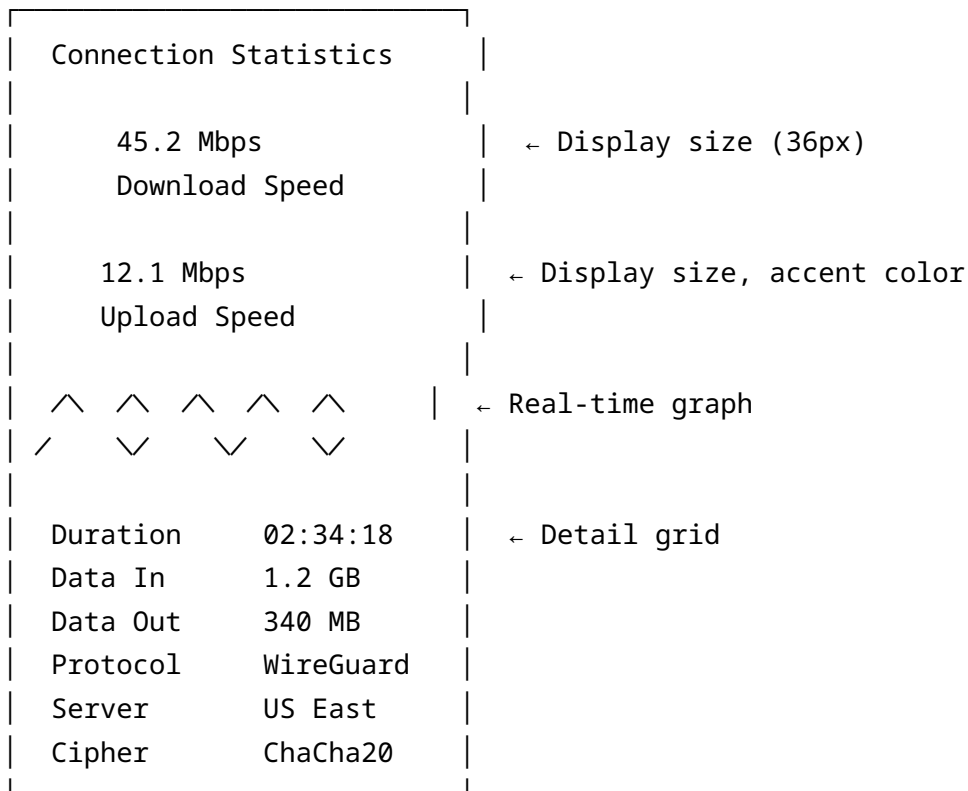

2.4 Split Tunneling Configuration

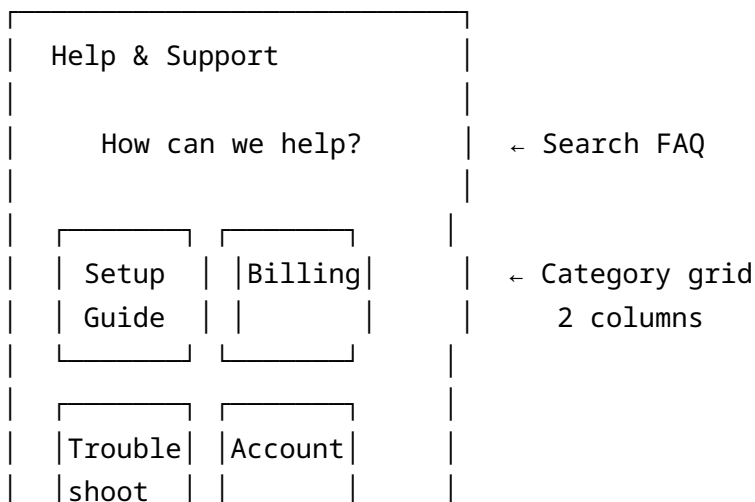

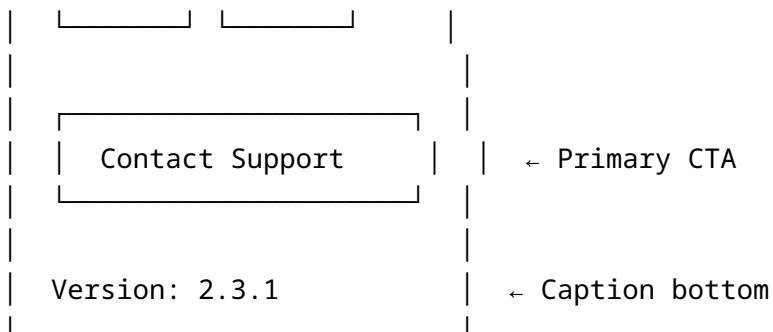

2.5 Connection Stats (Mobile)

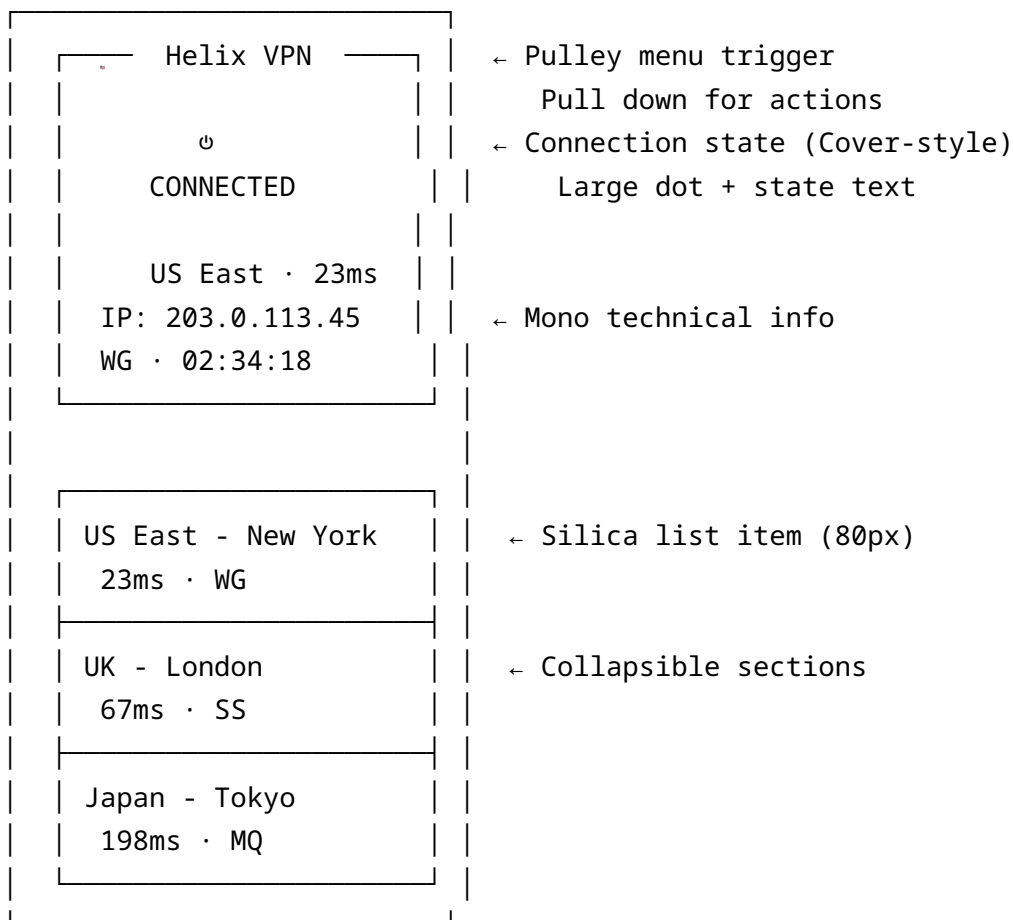

2.6 Support / Help

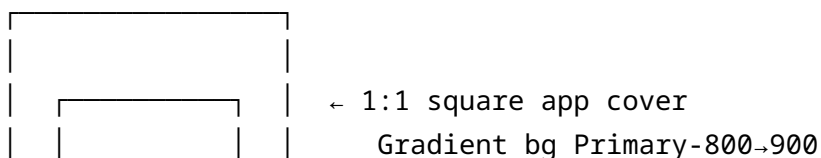

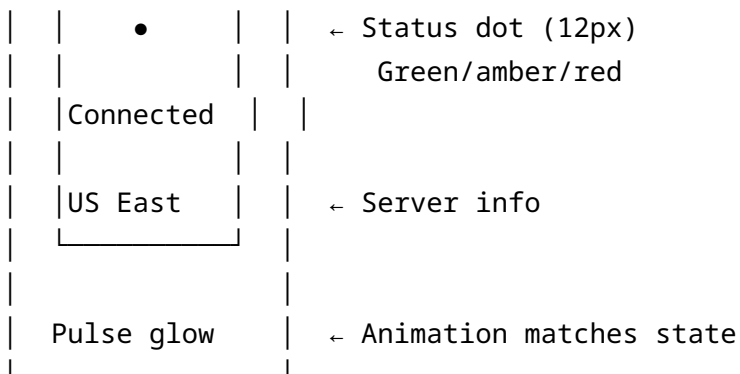

3. Aurora OS Screens (Qt/QML)

3.1 Main View (Connected)

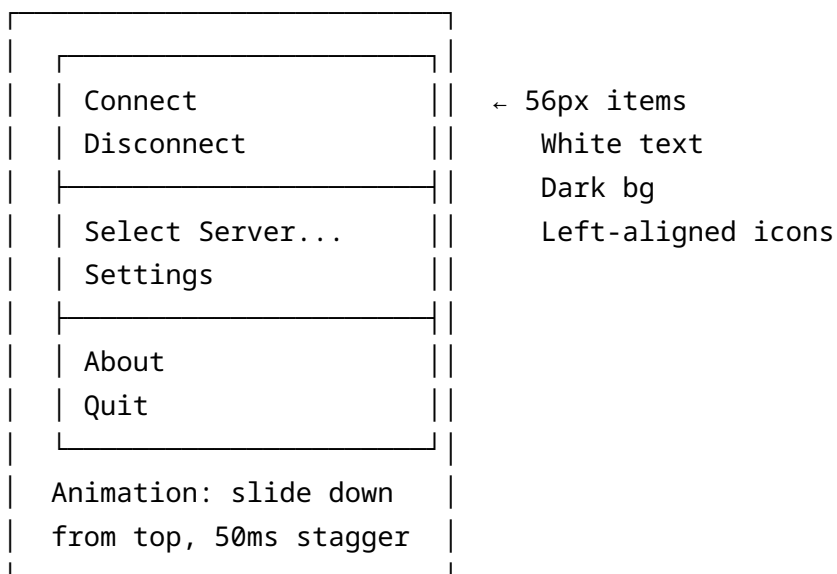

3.2 Aurora Cover Page

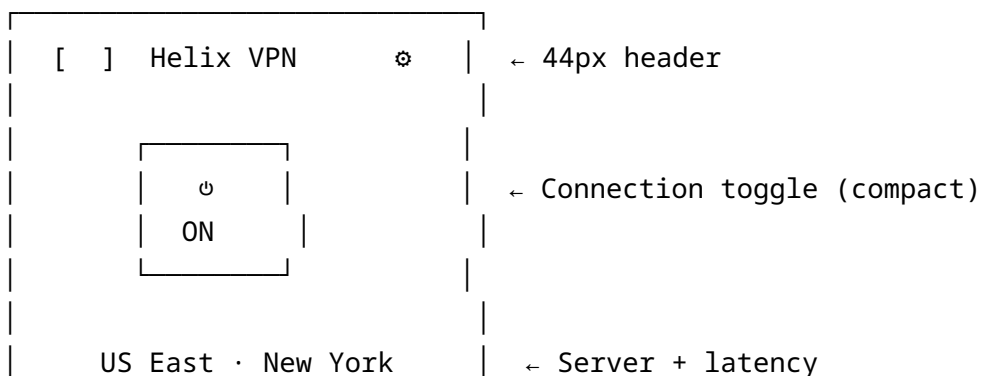

3.3 Pulley Menu (Pull-Down Actions)

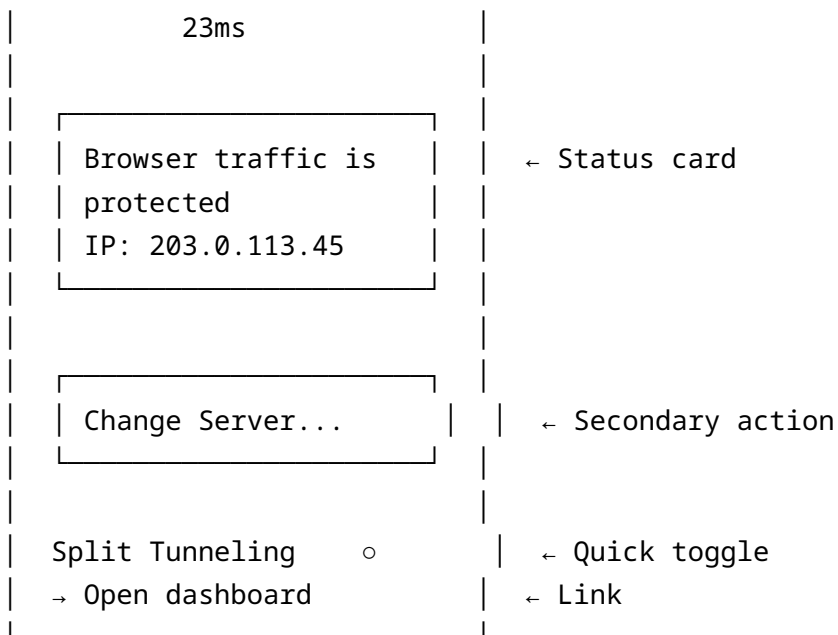

4. Web Extension Screens

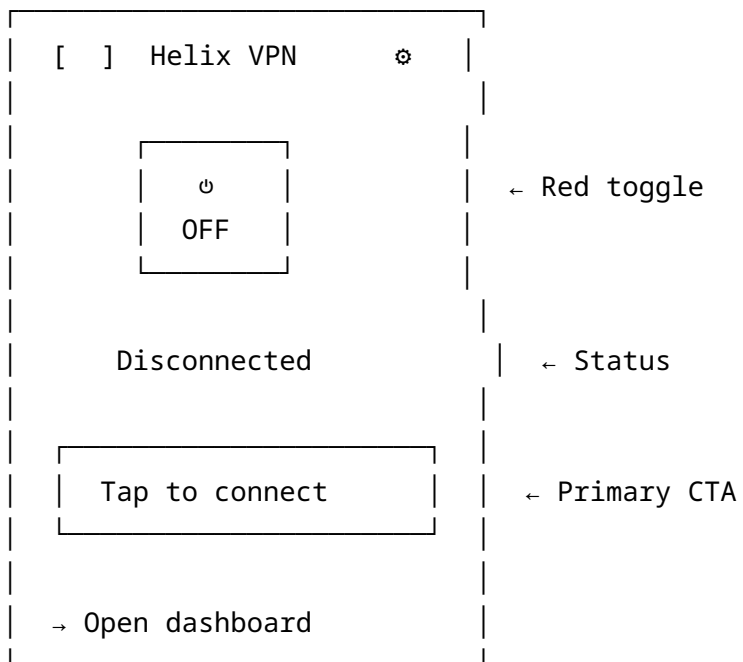

4.1 Popup — Connected

Popup window: 380px × 480px

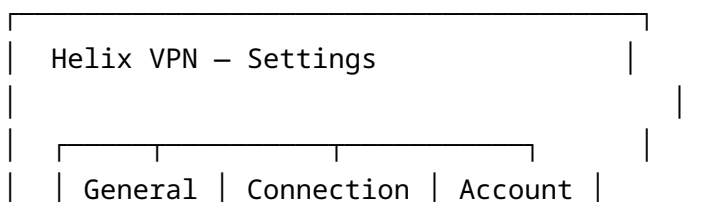

4.2 Popup — Disconnected

4.3 Options Page

Full browser tab: 600px

PROXY SETTINGS

Proxy mode: Auto ▼

PAC script URL: []

Bypass list: []

INTEGRATION

Native messaging: ☐ Enable

Desktop app detected: 2.3.1

NOTIFICATIONS

Show connection alerts ☐

Show errors ☐
